

CloverDX Webinar

The blueprint for scalable and efficient data ingestion

Pavel Najvar, VP Marketing @ CloverDX
Branislav Repček, VP Product @ CloverDX

CloverDX

Engineering-led data pipelines,
collaborative business tools,
supercharged with AI.

What is Data Ingestion/Onboarding?

Introducing data from a new source into an existing system or process (e.g. new client, partner, ...) by standardizing any format into a master format.

- Repeated process
- Often small but important variances between clients

W E B I N A R

The blueprint for scalable and efficient data ingestion

Objectives of data ingestion

Accept data as-is

Reduce the burden on your counterparty

Don't force clients to conform to your format

"The onboarding process is our first chance at making a good impression with our customers after the dollars are already spent. And CloverDX gives us a tool to be able to move faster."

ZY'WAVE
INSURING GROWTH

Simplicity

Empower the onboarding team

Minimize reliance on the engineering team writing new code

"That balance between 'can a non-technical person use it' versus how much effort you have to put in is important. Performance is number 1 for us. I'd say CloverDX hits the right notes for us."

The FIAT TECH logo, with "FIAT" in blue and "TECH" in grey, set within a white rounded rectangle.

FIAT TECH

Resilience

Handling variability in input format (client by client, day by day)

Tolerate week-to-week variances in each source

"You can imagine, you have 10 providers that are giving you these files, and even if it's the same type of file, same version, there could be variations within it, so we needed a process that could handle the variations in a configurable way."

Automation

Automating detection and assessment of data to onboard
Orchestrate end-to-end onboarding process

"By far the most valuable thing CloverDX has brought is that automation. Being able to pick up those orders and jobs and run them in the middle of the night and not have somebody that has to be there first thing in the morning to get it done is definitely the most valuable piece."

Reusability

New client != New pipeline

"With CloverDX, the Engineering team builds reusable, generic components and processes, and the Client Operations team uses and extends them for client-specific integrations -- delivering fast turnaround for client onboarding."

The FIAT TECH logo, with "FIAT" in blue and "TECH" in grey, set within a white rounded rectangle.

FIAT TECH

Reality

Having two separate CRMs for this one company sounds like a nightmare, and it was...getting all of the data that was in different Excel spreadsheets into a consolidated location.

Prior to using CloverDX, different parts of the organization were dealing with different client data, with everyone building their own technology - using different tools - to translate and standardize the data into a format suitable for each client. It was working, but not very efficiently, and everyone involved could feel the pain.

10 years ago, a script-based approach to integration seemed like a good idea for a leading US wealth management firm. 9 years later, after very substantial growth in clients and data sources, the maintainability, error rates and lag times had become a serious threat to transparency and overall quality of service.

Before CloverDX, we would spend 80% of our time just extracting and preparing the data...

The CloverDX Blueprint for ingestion

CloverDX Platform

CloverDX is a **data integration & transformation platform** designed to help organizations manage complex data workflows, automate data pipelines & ensure data quality across systems.

Operational
Data

Master
Data

Engineering-led Data Pipelines

Low-code Productivity

High-code Capability

Collaborative Business Tools

Data Mapping

Data Stewardship

AI integration

AI Assistant

AI transformation

Privacy

"Set & forget"

Fully automated
workflows

"People in the loop"

Semi-automated
business processes

Self-hosted on-prem/cloud
Privacy & Governance
Cost control

High performance
High availability
Scalability

Enterprise-grade Control
Monitoring
Enterprise interoperability

THE BLUEPRINT

Modular architecture

New input = New reader

Rest is reusable

THE BLUEPRINT

Automation

Rule of Four

If you're doing it more than four times, automate

Challenge of abstraction

Is there anything common that I can abstract away and automate?

Even 50% automation is better than none.

THE BLUEPRINT

Division of roles

Engineers

- Orchestration framework
- Connectors
- Ops & performance

Business teams

- Data mapping
- Business logic
- Stewardship

Division of roles + Right tools

Engineers

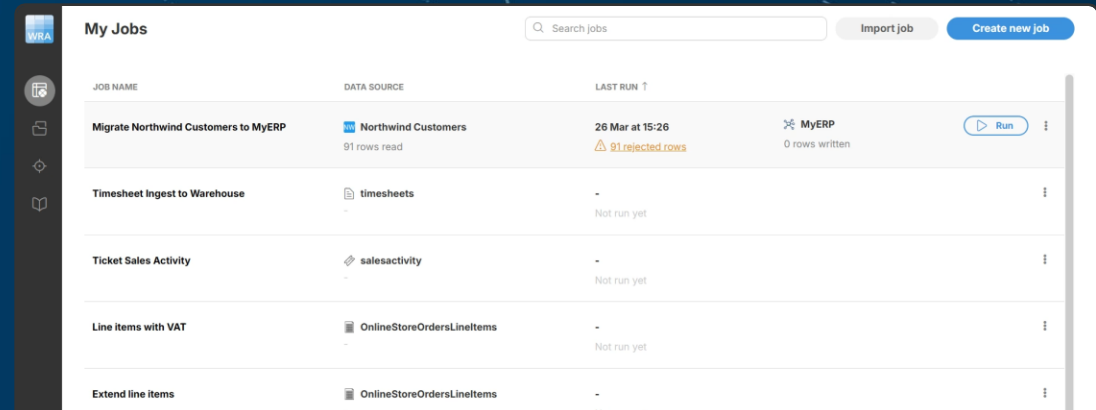

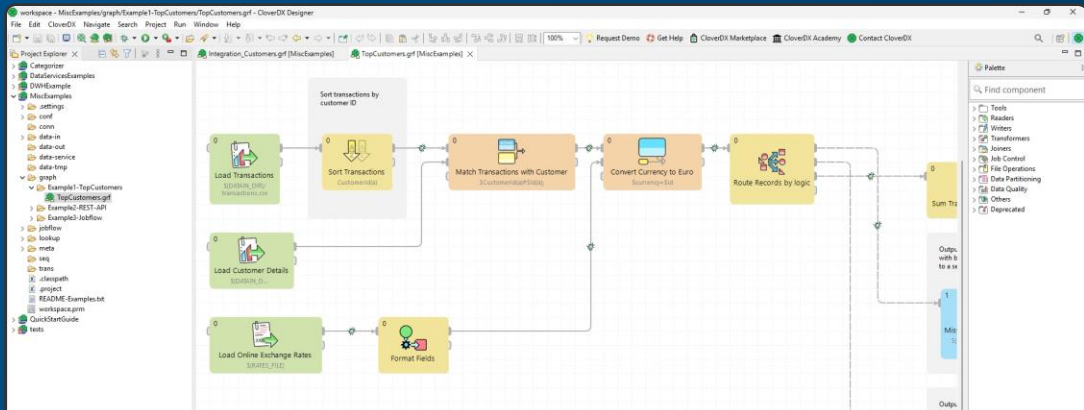

- orchestration framework
- connectors
- performance

CloverDX Designer
CloverDX Server

Business teams

- data mapping
- business logic
- stewardship

CloverDX Wrangler
CloverDX Data Manager

A screenshot of the CloverDX Wrangler interface, showing a table of jobs. The table has columns for 'JOB NAME', 'DATA SOURCE', and 'LAST RUN'. The first job is 'Migrate Northwind Customers to MyERP', which has a data source of 'Northwind Customers' and a last run date of '26 Mar at 15:26'. It shows '91 rows read' and '0 rows written'. The other jobs listed are 'Timesheet Ingest to Warehouse', 'Ticket Sales Activity', 'Line Items with VAT', and 'Extend line items', all of which have not yet run.

JOB NAME	DATA SOURCE	LAST RUN
Migrate Northwind Customers to MyERP	Northwind Customers	26 Mar at 15:26 91 rows read 0 rows written
Timesheet Ingest to Warehouse	timesheets	- Not run yet
Ticket Sales Activity	salesactivity	- Not run yet
Line Items with VAT	OnlineStoreOrdersLineItems	- Not run yet
Extend line items	OnlineStoreOrdersLineItems	- Not run yet

CloverDX ROI Metrics from Global Leaders

Using CloverDX for Data Ingestion

Fulfillment of 4.5 million
packages annually

2 hours => 12 minutes
Manual to automation transformation

Financial Services
8,000+ firms served

Real-time
100+ sources processed

Retail research
Global leader

66 hrs / person
saved per research cycle

Insurance SaaS
15,000+ customers

Bottleneck => "too fast"
customer onboarding

Investment mgmt
500+ clients

5 days => 1/2 days report prep
Grow without headcount increase

Healthcare tech
National leader

83% faster
HL7 ingest & processing

"We get the speed and scalability from the client's perspective, and the technical scalability of a good architecture. That to us is a win. "

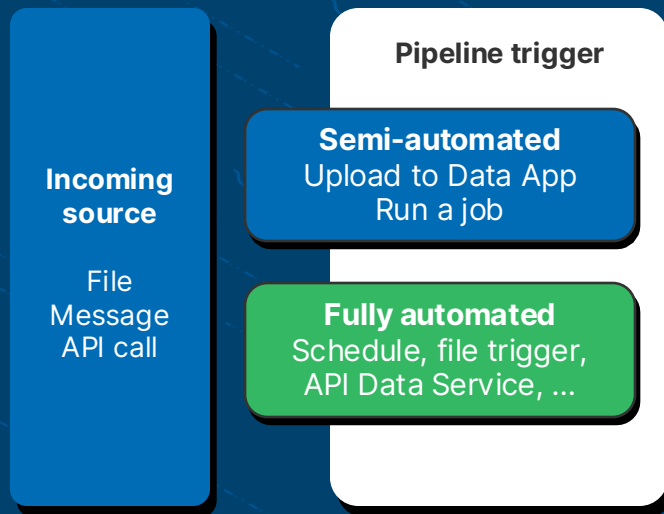

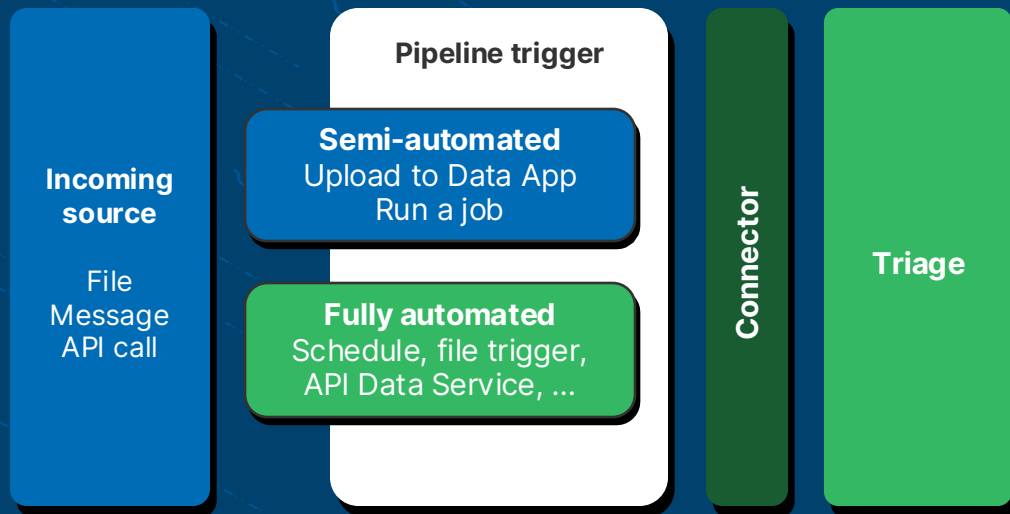

George Mohr
SVP, Head of Software Engineering

The blueprint for scalable and efficient data ingestion

Demo

Organizational Impact

- **Faster, more reliable onboarding builds internal trust & transparency**
- **Frees up engineers → Refocus on innovation, not firefighting**
- **Positions company as agile partner for clients (pre-sales, onboarding, delivery)**
- **Boosts competitive edge: Pre-sale/Post-sale**

The blueprint for scalable and
efficient data ingestion

Takeaways

Repeatable patterns = Scalability

Divide work across roles = Efficiency

Empower non-technical staff = Innovation

Automation + Oversight = Reliability

Q & A

hello@cloverdx.com

CloverDX

Engineering-led data pipelines,
collaborative business tools,
supercharged with AI.

IWSR is the leading authority on global beverage alcohol data, delivering detailed market and brand-level insights across 160 countries. Their research supports strategic decisions for major drinks companies using a mix of supplier data, interviews, and market modeling.

- ✓ Automated data ingestion pipeline leveraging **CloverDX Business Tools**
 - **Data Wrangler** - Flexible column mapping of non-standardized Excel formats
 - **Data Manager** - Critical brand line matching step to IWSR's internal taxonomy
- ✓ Manual data entry from inconsistent Excel files was slow and error-prone. Researchers were spending too much time typing, not analyzing.
- ✓ Non-technical staff now manage early steps; researchers focus on value-added analysis.

66 hours
saved per researcher during
the research cycle

58%
of files were automated in year
one (targeting 70%+ next)

Formerly Diameter Health, a national leader in clinical data quality and interoperability, now merged into Availity they empower providers and health plans to benefit from actionable, real-time, and precise data.

- ✓ Reduces friction caused by variations of data compared to standards
- ✓ Refine raw patient data into high quality, actionable information at scale
- ✓ Ingest and transform complex healthcare data (HL7 v2) into a standardized format
- ✓ Solving the complex task of managing sprawl of variations in data formats from providers
- ✓ Enables clinical experts with a no-code way to ingest HL7 files

83%

Reduced time in mapping HL7

Excel-based configuration

Easy learning curve for no code solution

An operational reporting and analytics platform specifically designed for ERP systems (like SAP and Oracle EBS). It empowers business users to easily access, understand, and report on complex ERP data without needing deep technical knowledge of the underlying database structures, delivering actionable insights directly from the source.

- ✓ CloverDX complements Angles by integrating directly with both ERP and non-ERP data (e.g., from CRM, legacy systems, spreadsheets) with the insights surfaced by Angles, providing a more unified and comprehensive view for cross-functional analysis and reporting.
- ✓ CloverDX helped Insightsoftware re-platform the data ingestion and validation layer to open up opportunities in new markets and deliver expanded value to customers.

100s of Global Deployments
OEM embedded data ingest

Scalable Platform for data ingest
Large Volumes of Business-critical Data

A leading global provider of technology and solutions for risk and return management, enabling their customers to manage their investment decisions.

- ✓ They've automated time-consuming, repetitive manual investment reports with CloverDX
- ✓ Standardized set of reports but needs updated every quarter
- ✓ Replaced stressful weeks of building Excel reports with automated CloverDX jobs
- ✓ Enabled to scale out the business without increasing headcount
- ✓ They'd spend days on preparing reports each quarter, now all the calculations, validations and building of the reports is automated

90%

Reduction of repetitive manual work

5 days to 1/2 day

Reduced time to produce the reports they needed

New market opportunities

As the teams were freed up to take on new clients

Zywave provides software as a service products for insurance brokers and financial planners. Zywave is the largest enabler of digital quoting in the insurance industry, powering digital distribution by connecting insurers with agents and brokers to help create a seamless, end-to-end experience.

- ✓ Customer onboarding use case – data conversion from legacy systems to their platform
- ✓ CloverDX took the data engineering team from being a bottleneck in the customer onboarding process to being too fast (and leaves them waiting for the customer success teams to finish their part)
- ✓ Replaced an older hand-coded bespoke solution with accumulated technical debt
- ✓ Turned manual time-consuming effort into a 'push-button' experience for less technical staff

30% reduction

Reduction of the data onboarding time thanks to templated solution

15,000+

Zywave customers

New product releases enhancements in a year

FIA Tech is a fintech company that standardizes and processes real-time trade data from brokers, hedge funds, and asset managers. Their platform, Trade Data Network (TDN), ingests diverse data formats and protocols, transforming them into a unified schema for downstream use.

- ✓ Their existing tool (eXceptor) couldn't scale, lacked flexibility, transparency a reliability.
- ✓ Chose CloverDX for its performance, flexibility, and collaboration
- ✓ Built a reusable, modular ingestion framework allowing developers and business experts (Connectivity team) to collaborate effectively
- ✓ They leveraged CloverDX's native Kafka, MQ, and FIX support to standardize and accelerate data ingestion workflows.

Compliance-readiness

Traceability and version control baked in

"We get the speed and scalability from the client's perspective, and the technical scalability of a good architecture. That to us is a win." - George Mohr
